	The problem solved by the invention is that of providing the merchandise display unit with a small ratchet device so as to minimise vibrations when the back panel moves relative to the track.		
	To solve this problem, the invention includes a ratchet device separate from the broad folds of the track, operating by the engagement of at least one notched extension on the sliding back panel and at least one matching counterpart on the track supporting said back panel.		
	These features are novel and cannot be derived in an obvious manner from the cited documents by a person skilled in the art seeking to solve the above-mentioned problem.
